

THREE BAY GARAGE WITH A T-SHAPE BARN.

Three bay garage with a T-shape barn

Our client, a keen classic cars enthusiast, wanted a beautiful setting in which to house his own collection. This ambition of his saw us creating a stunning scheme which combined a high-end timber garage with a T-shaped barn, providing enough space - and gorgeous placement - in which his cars could sit comfortably and gorgeously within.

Client BRIEF

Our client required a showroom-style building with a softer exterior ideal for storing and showcasing his incredible collection of vehicles. The build was required to be spacious, bright and secure while outwardly matching the client's grounds; light on the inside so that the focus of visitors was immediately drawn to the room's subject and varied, polished timber on the outside to complement the surrounding fields and trees.

Our SOLUTION

We built the bespoke three-bay garage with T-shape barn to the client's brief and added on many personal touches, ensuring their wishes were fully met. We added, for instance, red cedar tiles and used oak beams and stays to add to the visual impact of the build. Inside, we created a 'showroom feel', ideally presenting his array of stunning classic cars. We also fitted the build out with featheredge cladding and a 25 and 45 degree pitched roof, accenting the building in an impressive way.

The RESULT

"I found the team to be cooperative and proactive when working with them to achieve a first class new garage block."
